

LOCAL OFFICE COMMUNICATION SYSTEM

Setup

Make a new branch with task name and your git nickname

Goal: Set up local email and resource sharing.

Tasks

- Install and configure local mail server (e.g., hMailServer or Postfix).
- Create at least 5 user email accounts and send test emails locally.
- Send and receive test messages using a mail client (Thunderbird or Outlook).
- Configure aliases, forwarders, and attachment size limits.
- Set up file sharing (Linux Samba or Windows shared folders) for different roles.
- Share one or more printers over the local network.
- Configure shared printer access.
- Simulate role-based access: restrict some folders to certain users.
- Create user manuals for both email and shared resource access.

Submit: Email configs, test messages, shared folders logs/screenshots.

Estimated time 2 weeks
