

OFFICE NETWORK CONFIGURATION

Setup

Make a new branch with task name and your git nickname

Goal: Simulate and document an office network with backup strategies.

Tasks

- Install VirtualBox or Cisco Packet Tracer and set up a small office simulation: 3 clients, 1 server, 1 printer.
- Assign static IP addresses and configure subnetting.
- Create a network topology diagram using draw.io or diagrams.net.
- Set up local DNS or hosts file to simulate domain resolution.
- Configure shared folders and printer via file server (Samba or Windows File Sharing).
- Implement automatic daily backups from clients to the server using rsync (Linux) or robocopy (Windows).
- Simulate failure and recovery (delete a file and restore from backup).
- Document the network, IP table, backup strategy, and testing results.

Submit: Network diagram + screenshots + backup logs.

Estimated time 2 weeks
